A-flex design

responds to the market demands on usage of space, functionality & safety

A-flex fits elegantly into most buildings. delivered in steel combined with steps and handrails in materials to match surrounding interior and architecture. The A-flex Compact is delivered for indoor as well as for outdoor applications.

Equal Access

The A-flex Compact replaces the normal staircase with a lift and staircase in the same product. Simple button controls change the staircase into a lifting platform providing easy and safe access between levels.

All in One

Safety

The A-flex Compact is equipped with all thinkable safety features: Roll-off protection, squeezing, fault operation, malfunction, etc. If one of these safety features is activated, the A-flex Compact will immediately stop moving and an alarm will sound.

Technical.

The A-flex Compact operates through four linear actuators. An advanced control ensures a perfect synchronous & smooth movement. The A-flex Compact is equipped with a special safety circuit, which includes infrared sensors, ensuring no accidents will happen during operation of the A-flex compact.

Functionality.

Using the A-flex Compact is extremely simple. From upper or from lower level the staircase can be changed to a lifting platform and movement up and down is operated on the panel on the lifting platform. All safety functions are controlled automatically. The A-flex returns to position as a staircase after one minute without operation.

Dimensions.

The minimum size of the lifting platform is 1200(L) x 900(W) mm, but can be made in larger lengths on request. The A-flex Compact is supplied with a maximum lifting height of 1250 mm.

Installation.

A-flex requires no modifications to the existing building, other than replacing an existing staircase. Only requirements for the A-flex Compact is a level floor and power supply.

Specifications.

Power Supply: 230v – 10 amps
Max. load: 200kg
